Result Sheet

Assignment: Standard Test
Student: Aarohi Singh
Total Score: 13/32

Question	Score	Reason
1	0/1	Incorrect option chosen. Student selected Option (D), but the correct answer is Option (B) 2.16 cm.
2	1/1	Correct answer. Student correctly selected Option (B) 4.4 cm.
3	1/1	Correct answer. Student correctly selected Option (D) 50°.
4	1/1	Correct answer. Student correctly selected Option (B) 4 : 7.
5	0/1	Incorrect option chosen. Student selected Option (B), but the correct answer is Option (D) $DC^2 = CF \cdot AC$.
6	1/1	Correct answer. Student correctly selected Option (C) x = 16, y = 8.
7	1/1	Correct answer. Student correctly selected Option (D).
8	1/1	Correct answer according to the marking scheme. Student selected Option (A).
9	0/2	Incorrect proof. The student selected incorrect pairs of triangles, wrote invalid side ratio relations, and failed to correctly apply AA similarity.
10	3/3	Fully correct. Proved similarity $\Delta AOB \sim \Delta DOC$, set up the correct ratio of sides AO/OC = AB/DC, and correctly calculated DC = 8 cm.
11	0/3	Incomplete. Only 'Given' and 'To prove' were written; no construction or proof was provided.
12	0/5	Unattempted proof. The student only wrote 'Given' and 'To prove' with a diagram, but provided no proof.
13	3/5	Partially correct. The student identified similarity between the two triangles and used the angle sum property to arrive at $\angle BAC = 90°$, but the ratio formulation (BD/AD = DC/AD) was inaccurate and steps were disorganized.
14.i	1/1	Correct calculation. Found BC = 56.4 m using triangle similarity and correct ratios.
14.ii	0/1	Incorrect. The student attempted to use ratios but made calculation errors and failed to obtain AG = 38 m.
14.iii	0/2	Unattempted. Question number written but left completely blank.
14.iv	0/2	Unattempted. No work shown for this sub-part.
