Result Sheet

Assignment: Standard Test
Student: Aashi Jain
Total Score: 21.5/32

Question	Score	Reason
1	1/1	Correct answer B) 2.16 cm selected.
2	1/1	Correct answer B) 4.4 cm selected.
3	0/1	Incorrect answer D) 1.1 cm selected. The correct option is D) 50°.
4	1/1	Correct answer B) 4 : 7 selected.
5	1/1	Correct answer D) $DC^2 = CF \cdot AC$ selected.
6	1/1	Correct answer C) x = 16, y = 8 selected.
7	0/1	Incorrect answer A) selected. The correct option is D) A is false but R is true.
8	1/1	Correct answer A) selected.
9	2/2	Correctly proved $\Delta BCA \sim \Delta DBA$ using AA similarity and established $AB^2 = BC \times BD$.
10	3/3	Correctly proved $\Delta AOB \sim \Delta DOC$ using AA similarity, used corresponding side ratios, and found DC = 8 cm.
11	3/3	Correct construction and application of the Midpoint Theorem in ΔADS and ΔBCF to prove $AF = (1/3)AC$.
12	2/5	Assumed corresponding angles were equal without first establishing that the lines are parallel via converse of BPT (circular reasoning). Did not utilize the given numerical ratio to establish sides being equal, resulting in deductions.
13	5/5	Excellent and complete proof using SAS similarity of ΔADB and ΔADC, corresponding angles, and angle sum property to prove $\angle BAC = 90°$.
14.i	0/1	Not attempted.
14.ii	0/1	Incomplete work; set up Pythagoras theorem instead of using trigonometry (tan 45°) and did not evaluate AG.
14.iii	0/2	Not attempted.
14.iv	0.5/2	Awarded 0.5 marks for setting up total path length (AF + FE + EB). Deducted marks for calculating EB incorrectly using Pythagoras theorem instead of trigonometry and leaving the final answer incomplete.
