Result Sheet

Assignment: Standard Test
Student: Atika Tyagi
Total Score: 17.5/32

Question	Score	Reason
Q1	0/1	Incorrect option selected ((c) 2.7 cm instead of (B) 2.16 cm). The student incorrectly used the ratio AP/PB instead of AP/AB.
Q2	1/1	Correct option and value selected: (B) 4.4 cm.
Q3	1/1	Correct option selected: (D) 50°.
Q4	1/1	Correct option selected: (B) 4 : 7.
Q5	1/1	Correct option selected: (D) $DC^2 = CF \cdot AC$.
Q6	1/1	Correct option selected: (C) x = 16, y = 8.
Q7	1/1	Correct option selected: (D) A is false but R is true.
Q8	0/1	Incorrect answer. The student wrote an incorrect/contradictory statement claiming R is not the correct explanation.
Q9	2/2	Full marks awarded. Correctly proved $\Delta ACB \sim \Delta DAB$ using the AA similarity criterion and deduced $AB^2 = BC \times BD$.
Q10	3/3	Full marks awarded. Correctly proved similarity of triangles ΔOAB and ΔODC, used side ratios, and correctly calculated DC = 8 cm.
Q11	3/3	Full marks awarded. Correct construction and application of BPT/midpoint theorem in both triangles to prove AF = (1/3)AC.
Q12	0.5/5	Awarded 0.5 marks for drawing the figure and stating Given and To Prove. The actual proof was left completely unattempted.
Q13	1/5	Awarded 1 mark for identifying $\angle ADC = \angle ADB = 90°$. Deducted 4 marks for using an incorrect side ratio, falsely assuming ΔABD and ΔACD have equal angles of 45°, and failing to provide a valid proof.
Q14.i	0.5/1	Awarded 0.5 marks for identifying cos 45° = BH/BC. Deducted 0.5 marks for using the incorrect trigonometric value cos 45° = 1/2 instead of $1/\sqrt{2}$, resulting in an incorrect answer of 80 cm.
Q14.ii	1/1	Full marks awarded. Correctly used tan 45° = GF/AG to find AG = 38 m.
Q14.iii	0/2	Unattempted. No answer provided.
Q14.iv	0.5/2	Awarded 0.5 marks for recognizing the total length as the sum of segments AF + FE + EB. Deducted 1.5 marks for using the incorrect trigonometric formula to find EB and subsequent calculation errors.
