Result Sheet

Assignment: Standard Test
Student: Nipun Tyagi
Total Score: 21.5/32

Question	Score	Reason
Q1	1/1	Correct option (B) selected with complete and accurate working.
Q2	1/1	Correct option (B) selected with correct use of Basic Proportionality Theorem.
Q3	1/1	Correct option (D) selected with correct calculation using triangle similarity and angle sum property.
Q4	1/1	Correct option (B) selected.
Q5	1/1	Correct option (D) selected with valid supporting proof.
Q6	1/1	Correct option (C) selected with working shown.
Q7	0/1	Incorrect option chosen (A instead of D). The assertion is false because DE || BC.
Q8	1/1	Correct option (A) selected.
Q9	2/2	Correct proof establishing $\Delta DAB \sim \Delta ACB$ via AA similarity and deducing $AB^2 = BC \times BD$.
Q10	3/3	Correctly re-attempted on page 6; proved similarity between ΔAOB and ΔCOD and accurately found DC = 8 cm.
Q11	3/3	Complete and accurate proof with correct construction (DG || BF) showing AF = FG = GC and AF = (1/3)AC.
Q12	1/5	Incomplete answer. Awarded 1 mark for writing Given, To Prove, Construction, and starting the proof.
Q13	5/5	Completely correct proof using SAS similarity and angle sum property to prove $\angle BAC = 90°$.
Q14.i	0/1	Not attempted.
Q14.ii	0.5/1	Attempted using Pythagoras theorem instead of trigonometry and left in radical form without arriving at 38 m.
Q14.iii	0/2	Not attempted.
Q14.iv	0/2	Not attempted.
