Result Sheet

Assignment: Standard Test
Student: Devanshi
Total Score: 12/32

Question	Score	Reason
1	0/1	Incorrect option chosen (A instead of B).
2	0/1	Incorrect option chosen (D instead of B).
3	0/1	Incorrect option chosen (A instead of D).
4	1/1	Correct answer selected (B).
5	0/1	Incorrect option chosen (A instead of D).
6	0/1	Incorrect option chosen (D instead of C).
7	0/1	Incorrect option chosen (A instead of D).
8	0/1	Incorrect option chosen (B instead of A).
9	2/2	Correctly proved $\Delta BCA \sim \Delta BDA$ by AA similarity and established $AB^2 = BC \times BD$.
10	1/3	Attempted similarity of vertically opposite triangles ΔAOB and ΔCOD, but did not use the ratio of sides to calculate the length of DC.
11	3/3	Correct construction and fully accurate proof using BPT to show AF = (1/3)AC.
12	0/5	Invalid proof. Assumed the sides were parallel to the diagonals by construction rather than using the given side ratios and the converse of BPT.
13	4.5/5	Correct method and proof using SAS similarity and angle sum property. Minor deduction of 0.5 mark for writing the similarity vertices out of corresponding order ($\Delta ADB \sim \Delta ADC$ instead of $\Delta ADB \sim \Delta CDA$).
14.i	0/1	Incorrect method using Pythagoras theorem with incorrect side lengths resulting in BC = 62 m instead of 56.4 m.
14.ii	0/1	Incorrect method and calculation resulting in AG = 2.28 m instead of 38 m.
14.iii	0/2	Question not attempted.
14.iv	0.5/2	Awarded 0.5 mark for correctly identifying that total length = AF + FE + EB. Deducted 1.5 marks for an invalid method to find EB and incorrect final value.
