Result Sheet

Assignment: Standard Test
Student: Yug Bhushan
Total Score: 15.5/32

Question	Score	Reason
Q1	1/1	Correct answer (B) 2.16 cm.
Q2	1/1	Correct answer (B) 4.4 cm.
Q3	1/1	Correct answer (D) 50°.
Q4	1/1	Correct answer (B) 4 : 7.
Q5	0/1	Not attempted.
Q6	1/1	Correct answer (C) x = 16, y = 8.
Q7	0/1	Incorrect option chosen. Correct answer is (D).
Q8	0/1	Incorrect option chosen. Correct answer is (A).
Q9	2/2	Correct proof showing similarity of ΔDAB and ΔACB and correctly concluding $AB^2 = BC \times BD$.
Q10	3/3	Correct proof of similarity between ΔAOB and ΔDOC, correctly found DC = 8 cm.
Q11	0.5/3	Awarded 0.5 marks for initial setup/construction; the proof is incomplete.
Q12	0/5	Not attempted.
Q13	3.5/5	Successfully proved $\Delta ADB \sim \Delta CDA$ by SAS similarity. However, incorrectly assumed $\angle BAD = \angle DAC$ by CPST to force $\theta = 45°$ instead of using complementary angle relationships.
14.i	1/1	Correct calculation showing $BC = 40\sqrt{2} = 56.4$ m.
14.ii	0.5/1	Correctly determined that $\angle AFG = 45°$, but left the final value of AG uncalculated/incomplete.
14.iii	0/2	Not attempted.
14.iv	0/2	Not attempted.
